DETAILED CHECK RESULTS

✓ PASS	Google Consent Mode v2 Consent Mode v2 default state found (ad_storage and analytics_storage).
■ WARN	IAB TCF One TCF signal found: __tcfapi. No IAB consent string is stored, so ad-tech partners cannot read the visitor's consent. → Store an IAB consent string through your CMP and expose it on __tcfapi. See https://iab europe.eu/tcf/ .
✗ FAIL	Third-party trackers Trackers found in the served markup: Google Analytics, Meta Pixel. No consent platform is loaded before them, so they fire before consent. → Block non-essential tags until the visitor consents (GDPR Art. 6 and ePrivacy require consent BEFORE the tracker loads, not a banner afterwards).
✓ PASS	HTTPS & HSTS TLS 1.3 active, valid certificate (Let's Encrypt), HSTS max-age=31536000.
✓ PASS	Cookie consent Consent banner detected and cookie categories are declared (GDPR Art. 13).
✓ PASS	Forms & privacy link 5 forms detected, privacy policy linked in the footer.
✓ PASS	Legal pages Privacy policy and terms of service found on common paths.
■ WARN	Security headers No Content-Security-Policy and no X-Frame-Options. NIS2 Art. 21 expects basic technical measures, and CSP is the one auditors ask for first. → Add Content-Security-Policy: default-src 'self'. Start in report-only mode and tighten from the violations it reports.

✓ PASS

DORA resilience signals

HTTPS and a valid certificate are positive technical signals. This is not a DORA compliance assessment.

RECOMMENDED FIXES

- **IAB TCF** — Store an IAB consent string through your CMP and expose it on __tcfapi. See <https://iab europe.eu/tcf/>.
- **Third-party trackers** — Block non-essential tags until the visitor consents (GDPR Art. 6 and ePrivacy require consent BEFORE the tracker loads, not a banner afterwards).
- **Security headers** — Add Content-Security-Policy: default-src 'self'. Start in report-only mode and tighten from the violations it reports.
